

Title: Analysis of Aadhar card Enrollment in government school.

Abstract: Aadhar card is the only universal identity accepted across the country. Having aadhar card is important as it provides you with unique identity. Aadhar card data is managed by the unique identification authority of india(UIDAI). We are going to do analysis on aadhar card enrollment whether the student is enrolled in school is enrolled with the aadhar card or not. If the student is not enrolled with the aadhar card he/she may not get the benefit of the government scheme. It will also help in uniquely identifying the student in case of similarity or any other issue. Aadhar card analysis can also be used to manage the strength of the students in school and provide better education to all.
